

Cleaning and disinfecting advice

Vescom Protect

2020

Based on the test results, we suggest the following cleaning advice in addition to the standard cleaning instructions:

cleaning

- Vescom Protect can be easily cleaned with regular household cleaners and alcohol- and solvent-based cleaners, as well as with many aggressive chemicals such as acids and bases.
- Always follow the instructions of the manufacturer of the cleaning agent.
- Although Vescom Protect can withstand a broad range of aggressive chemicals, we recommend testing an inconspicuous area for material resistance.
- Do not use abrasive cleaners as these may damage the protective film.
- Always rinse with a wet cloth after cleaning.

disinfection

- Vescom Protect can be easily disinfected with all types of surface disinfectants, including alcohol-based liquids and active chlorine.
- Always follow the instructions of the manufacturer of the cleaning agent.
- Although Vescom Protect can withstand a broad range of aggressive chemicals, we recommend testing an inconspicuous area for material resistance.
- Always rinse with a wet cloth after cleaning.

Vescom will not be held responsible for any damage that may be caused during the cleaning and disinfection process.
