

Colourful acoustics

45 new colours of transparent, acoustic curtain fabrics

Press Release

Deurne, March 2017

Do you want to improve the acoustics and ease of communication in a room, to partition an open space, to create a flexible workplace or gain more privacy? The new colours of the Carmen, Marmara and Formoza transparent, acoustic curtain fabrics offer the solution. Three designs each with its own character, colour palette and mood. Despite their transparency and light weight, the fabrics have a sound absorption of between 0.5 and 0.6 α_{w} . Formoza and Marmara are floor-to-ceiling.

curtain – Formoza design

Carmen, Marmara and Formoza absorb up to five times more sound than customary transparent curtain fabrics. The look and feel of the three designs is light, transparent, fresh and clear. The fabrics merge with every interior – including seminar or conference rooms, hotel lobbies and offices. Vescom offers a solution for every interior which requires acoustically-effective translucent fabrics.

Formoza is a sporty, playful and graphic fabric with 12 clear fresh colours such as white and grey, orange, green and blue hues. **Marmara** has a soft textile look and feel with no fewer than 24 warm natural hues. Sand beige, taupe, bamboo, mint, jade & soft pink. Marmara can be used on both sides because of the gloss on the reverse. **Carmen** (9 colours) has an architectonic rib with a subtle gloss. Minimalistic with neutral tints, black, grey and copper.

Formoza and Marmara are floor-to-ceiling and, therefore, curtains can be made without seams.

curtain – Carmen design

transparent, fire retardant and acoustic

Although Carmen, Marmara and Formoza are transparent and extremely lightweight they nevertheless offer a sound absorption coefficient, α_w , of between 0.5 and 0.6. The use of these curtain fabrics reduces echoes, absorbs sound and improves communication in commercial surroundings such as office areas, conference rooms, restaurants, hotel lobbies and multifunctional halls. The fabrics are fire retardant and comply with the most stringent European standard for public buildings (B1 according to DIN 4102).

broad programme

The designs are being added to the O3 curtain binder. The curtain fabric collection consists of plain, patterned, black-out, dim-out and (acoustic) translucent curtain fabrics. The fabrics are lightfast, colourfast, fire retardant, safe, functional, durable and, in many cases, washable at high temperatures. All fabrics are Oeko-Tex certified.
