

# Cleaning advise

## textile wallcovering

---

2020

### **general**

Vacuum-clean a few times a year (no wet cleaning).

### **dry spots**

Remove surface dirt with the aid of a vacuum cleaner. Remove remaining dust, cigarette ash, 'dirty finger' spots and other dry dirt with a clean sponge or cloth dampened with a little clean, warm water but not too wet. When doing this, always work from the outside in: work toward the centre of the spot. Treat stubborn spots again with Vescom Cleaner. Use a dry, clean cloth to dab dry. Do not rub.

### **shoe rubber and polish spots**

For spots caused by shoes which have been in contact with the wall, Vescom Cleaner is sufficient. Apply to a clean cloth and treat the spots working from the outside in. When the spot has disappeared, dab dry with a clean, dry cloth.

### **wet spots**

Wet dirt spots can be best dealt with as quickly as possible: dab immediately with tissue or absorbent paper, a towel or other very absorbent material. For the follow up treatment use Vescom Cleaner.

### **additional information for silk qualities**

Silk qualities must only be cleaned dry. Remove contaminants that are on top by using a vacuum cleaner or with a soft brush.

### **important**

- Remove spots as quickly as possible.
- For cleaning wallcovering only use a sponge or cloth - never a brush.
- Do not use Vescom Cleaner directly on the wall; always apply to a clean cloth first.
- Use a cloth or sponge to dab; do not rub.
- Please read the instructions before attempting to apply Vescom Cleaner.
- Only clean silk qualities dry.

Vescom will not be held responsible for any damage that may be caused during the cleaning process.
